**Welcome to the Arria 10 SI Development Kit Board Test System!**

This Arria 10 SI Development Kit Board Test System enables you to experiment with several pre-built designs that you download on your Arria 10 SI device through the USB cable.

To download pre-configured designs on the Development Kit, as a minimum you must download Altera's programmer and USB device driver. Click [here](#) to download Altera's programmer.

After the programmer loads you will be prompted to install the USB driver. If you have not completed the driver installation, make sure both the programmer and USB driver are installed.

You can optionally load Altera's Quartus Prime software to design and download your own designs on the Arria 10 SI Development Kit by clicking [here](#).
